

Zonetech Firmware Update Instructions

To update the firmware on your Zonetech:

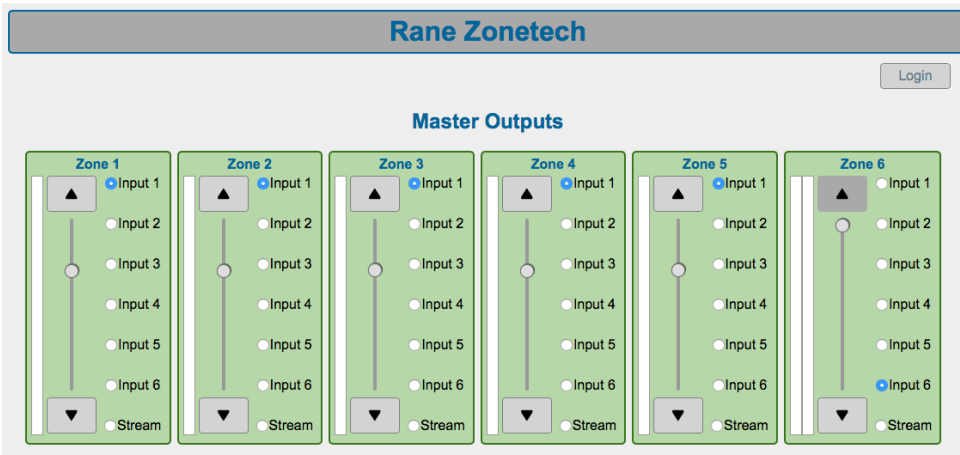

1. Power on Zonetech and connect a Cat 5e cable from the **Computer Ethernet** port on Zonetech to an Ethernet router/switch that has a DHCP server running.
2. Press the **Info** knob on the front panel of Zonetech until the **Wired Network Setting** is displayed.

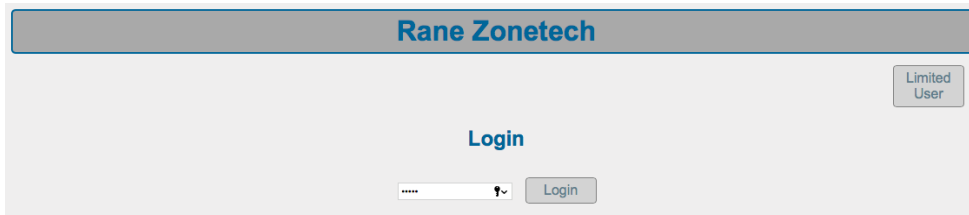

3. Open a web browser (on the computer that is connected to the same router/switch from step 1) and type in the following IP address: **http://172.28.0.52**.

4. On the **Master Outputs** web page, press the **Login** button.

5. At the Login prompt, type the default password **admin** and press the Login button.

6. Press the **Settings** button to go to the settings page. Click the download icon under the **Firmware Update** section and select the **Zonotech_Firmware_Version_1.1.0.053.rbin** file.

IMPORTANT: During the update process, **do not** power off Zonotech or disconnect it from the power outlet. Doing so can damage the unit.
